Iwa Nursery

## Children going to be a freshman! Thank you for one year!

I am glad that I had a good time with curious and energetic children over the past year. I feel strong in the appearance of the children who grow up as they grow taller and more able to do. I would like to express my sincere gratitude to all parents for their warm understanding and cooperation. Thank you very much.

The excitement of being a first-year student is growing among the children soon. While inflating that joy, I would like to cooperate with my friends on the remaining few days and recognize each other so that I can lead a more fulfilling life.

### I found Fossil!

When we went to zou-san park to play. The children who found the stones said, "Isn't this a fossil?" And a great excitement. In fact, it is a common stone such as obsidian, but the children who are curious continue to observe carefully. I feel the growth that leads to learning to science from the appearance of comparing the difference of color and shape with a friend. When we brought it back to the nursery school, we compared the stone poster with the stone I picked up, and I learned more. In the course of time, the experiment of hardness began by bumping the stone and the stone naturally. Children continued to be curious about how to crack, the color of the inside, the pattern, and a lot of notices. I want you to have fun learning at elementary school.

### "Remember nursery."

One day in front of the toilet, S-kun said, "Hey, I want to remember the nursery " When M-kun and R heard it, they answered saying, "Yes, I don't forget." Children understand the graduation school in their own way and think that they don't want to forget their favorite friends and happy memories. As they grew up, they forget a lot more, 'It was fun to go to nursery school!' I would be happy if they could remember just. Children who have developed curiosity, challenge, self-reliance, co-operation, and a lot of power. May that power be their power in the future!
